

GRAPHQL SCHEMA

in this GraphQL tutorial, I'll explain exactly what a GraphQL schema is and we need to create one. We'll also start to flesh out an object type (Book) inside the schema file.

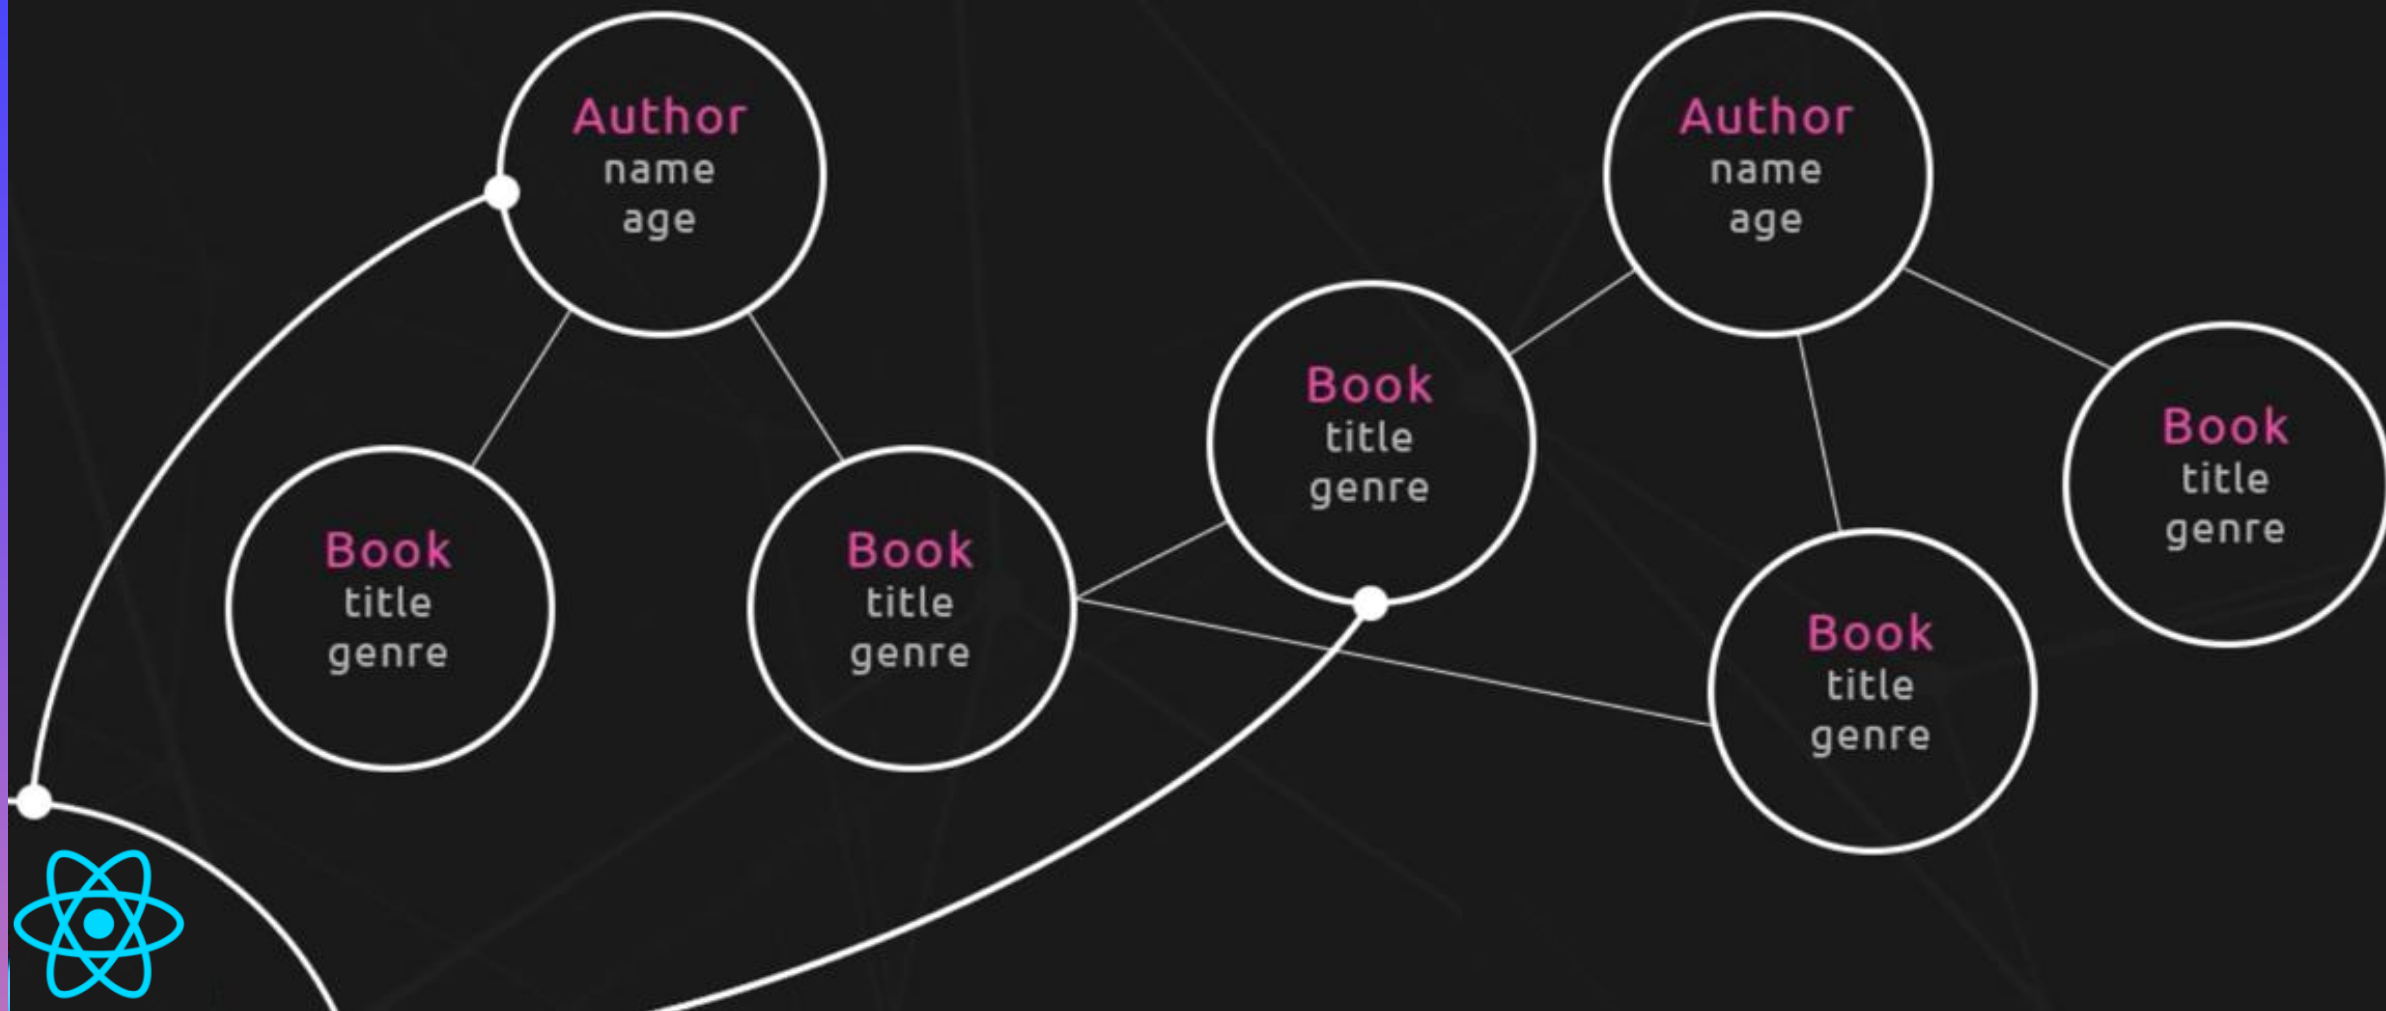

Express App Setup

Create folder 'schema' in the folder 'server'

Create file 'schema.js' in the folder 'schema'

Walking the Graph...

schema.js

```
const graphql = require('graphql');

const { GraphQLObjectType, GraphQLString } = graphql;

const BookType = new GraphQLObjectType({
  name: 'Book',
  fields: ( ) => ({
    id: { type: GraphQLString },
    name: { type: GraphQLString },
    genre: { type: GraphQLString }
  })
});
```
