

SETTING UP GRAPHQL

in this GraphQL tutorial I'll explain how we can use a package called `express-graphql` to set up GraphQL on our Express application

Install Nodemon

In the terminal write next command

- `npm i graphql express-graphql`

app.js

```
const express = require('express');  
const { graphqlHTTP } = require('express-graphql');  
  
const app = express();  
  
// bind express with graphql  
app.use('/graphql', graphqlHTTP({  
  // pass in a schema property  
}));  
  
app.listen(4000, () => {  
  console.log('now listening for requests on port 4000');  
});
```

Insert
code

nodemon app
